

MOBILE MAMMOGRAPHY

Lifesaving Convenience at Your Door

Take care of *you*

Our Program

UC Health Mobile Mammography is proud to offer screening mammograms to the Greater Cincinnati and Northern Kentucky communities. You will find the same amenities in our mobile unit that you would find in our breast centers, including a comfortable waiting area, registration area and private changing and screening rooms.

We offer the latest technology in breast imaging—including 3-D breast tomosynthesis—to produce clearer images for interpretation by the radiologist and to improve cancer detection. The utilization of CAD (computer-aided detection) also assists in the identification of small breast cancers that could be missed with mammography alone.

Our mobile unit, along with our hospital-based breast centers, are accredited by the American College of Radiology (ACR), ensuring our facilities meet quality standards. Our mammography technologists are registered by the American Registry of Radiologic Technologists and licensed in mammography. Our interpreting physicians are board-certified breast radiologists and unlike with any other mobile program or breast center in Greater Cincinnati and Northern Kentucky, UC Health breast radiologists interpret only breast images.
